Road to All A's

Rancho Moonrise — 90-Day Improvement Plan · Created April 9, 2026

This plan takes every area from the April 8 business audit and maps it to specific actions, owners, and timelines. Items already completed are marked ✅. The goal: bring every category from its current grade to an A within 90 days. Items marked AUTO will run as scheduled Claude tasks — no manual effort from anyone.

Last updated: April 9, 2026 — baseline confirmed via live web search (all 10 keywords, reviews, social, GBP)

Plan | Metrics | Audits

Grade Targets

B	→	A	Website (New Build)
D	→	A	Website (Current)
D	→	A	Google Business Profile
B-	→	A	Social Media
F	→	A	Review Platforms
C+	→	A	Booking Flow
B	→	A	Client Experience (HoneyBook)
C	→	A	Operations & Processes

PHASE 1

Quick Wins — This Week

April 9–15, 2026 · 7 days · Items that take under 2 hours each

Everything here is either free, fast, or both. These are the highest-impact items relative to effort. Most move the needle on GBP and Reviews — the two worst-graded areas.

1 Reply to all unreplied Google reviews

ASHLEY | MANUAL | GBP: D → B

Verified April 9: 9 of last 10 reviews are unreplied. Only one reply exists ("Thank you!!" to The Train Quest LLC). Each response should reference something specific from the review — not generic. Positive reviews: thank them and mention something about their stay. Negative reviews: acknowledge, explain what's changed, invite them back. Aim for all replies done in one sitting.

Impact: Directly improves local search ranking + shows future guests the business is engaged.

2 Complete GBP hotel amenities, description, and hours

ASHLEY | MANUAL | GBP: D → B

Verified April 9: Some amenities are now showing (Breakfast, Free parking, Accessible, Outdoor pool, Pet-friendly, Fitness center) but many categories remain unanswered. **CRITICAL:** The "From the owner" description currently contains a full blog post about glamping near Austin — this is NOT a business description and needs immediate replacement. Hours are still NOT set anywhere.

- ☐ ⚠️ **URGENT:** Replace blog post in "From the owner" with a real 750-char business description
- ☐ Answer remaining hotel amenity categories (Hot tub, Kitchen, Sustainability, Health & safety, etc.)
- ☐ Set hours for ALL days (currently no hours visible at all)
- ☐ Add opening date
- ☐ Verify phone number (737) 291-1260
- ☐ Update website URL to HTTPS

3

Answer Q&A + seed 10 FAQs on GBP

ADAM | CLAUDE | GBP: D → B

One question sitting unanswered ("Do you do day passes for the pool?"). Answer it, then seed 10 common questions and answer them from the business account: pet policy, check-in/out times, events schedule, booking process, alcohol policy, pricing ranges, kids allowed?, parking, directions from Austin, cancellation policy.

Claude will draft all 10 Q&A pairs. Ashley or Adam posts them to GBP.

4

~~Add 2–4 secondary categories to GBP~~ ✅ DONE

ASHLEY | MANUAL | GBP: D → B

Verified April 9: Already set — Hotel (primary), Campground, Event venue, Resort hotel, Wedding venue. Secondary categories don't display publicly but influence which searches surface the listing.

5

Claim TripAdvisor listing + optimize WeddingWire listing

ASHLEY | NANCY | MANUAL | REVIEWS: F → D

Verified April 9: TripAdvisor confirmed — 0 reviews, 0 photos, NOT claimed ("Is this your business?" link visible). This is the single biggest review platform gap. Claim it, add photos, write description. WeddingWire listing DOES exist (audit was wrong) — optimize it with updated photos and descriptions.

6

~~Set up Instagram link-in-bio page~~ ✅ DONE

ADAM | CLAUDE | SOCIAL: B- → B+

Verified April 9: Linktree already set up (linktr.ee/ranchomoonrise) with Book A Room, Weddings, Events Calendar, Day Pool Pass, and merch shop. Bio reads: "Austin, TX 🌙 Glamping + Events Ranch / Cabins · Live music · Weddings · Pool" with 13.3K followers.

7

Verify social profile links on GBP

ASHLEY | MANUAL | GBP: D → B

Google auto-added Instagram (@rancho_moonrise) and TikTok (@rancho_moonrise). Verify these are correct. Add Facebook page link if one exists.

PHASE 2

Systems & Automation — Weeks 2-3

April 16–29, 2026 · 14 days · Build the systems that run on autopilot

Phase 2 is about building the machines that do the work going forward. Review collection, inquiry follow-up, GBP posting, and the website launch. Most of these have a "Claude builds it, Ashley activates it" pattern.

8

Build post-stay/post-event review request system

ADAM | CLAUDE | AUTO | REVIEWS: F → C

Build an automated email/text sequence triggered after checkout. Route by stay type: wedding guests → The Knot + Google, glamping guests → Hipcamp + TripAdvisor, event attendees → Google + Facebook. Include direct review links. Send 48 hours after checkout.

Could 3x review count across platforms in 6 months. This is the #1 fix for the F grade on Reviews.

9

Build automated inquiry response sequence

ADAM | CLAUDE | AUTO | BOOKING: C+ → B+

When someone fills out the website contact form, they currently get nothing. Build a 3-email sequence: (1) Instant confirmation with what to expect, (2) 24hr follow-up with Calendly tour link + FAQ, (3) 72hr gentle nudge if no response. This is where leads are dying.

Even a 10% improvement in inquiry-to-tour conversion = multiple additional bookings per month.

10

~~Launch weekly GBP posting schedule~~ ✅ DONE

CLAUDE | AUTO | GBP: D → A

Verified April 9: Scheduled task "rancho-gbp-weekly-post" running every Monday at 9 AM. Posts confirmed visible on GBP — latest post "16 mins ago" and another "a day ago". Working as intended.

11 Launch new website on main domain

ADAM | ASHLEY | WEBSITE: D → A

The new build (rancho-moonrise.vercel.app) is better in every way. Steps remaining:

- ☐ Ashley final review of mobile layout
- ☐ Ashley uploads hero photos via CMS
- ☐ Adam sets up DNS cutover from BofillTech to Vercel
- ☐ SSL verification
- ☐ Build redirect map from old URLs to new structure
- ☐ Submit sitemap to Google Search Console
- ☐ Notify BofillTech of transition

12 Fix the Hipcamp listing

ASHLEY | CLAUDE | BOOKING: C+ → B+

Current listing says "no showers" and "shared toilet" — reads like a bare campsite, not a luxury glamping ranch. Claude rewrites the copy and photo captions. Ashley updates on Hipcamp: fix amenity list (showers, private bathrooms if applicable, AC, linens), upload best property photos, rewrite description to match brand voice.

13 Fix the broken Cloudbeds booking URL

ASHLEY | MANUAL | BOOKING: C+ → B+

The direct Cloudbeds URL found in search results returns a 404. This means people searching for Rancho Moonrise bookings are hitting a dead end. Check Cloudbeds settings, fix the URL, and ensure the "Book Now" button on the website points to a working link.

14 Add pool pass promotion across all channels

ADAM CLAUDE REVENUE

Pool passes (ResortPass) are high-margin, low-effort revenue currently buried. Make it a primary CTA: add to GBP products/services, Instagram bio link-in-bio page, website hero section, and Facebook page. Consider dynamic pricing (weekends higher, weekday specials).

15 Enable Google Chat on GBP

ASHLEY MANUAL GBP: D → A

Chat is not set up. For a hospitality/events property, Google Chat captures booking inquiries directly from search. Enable it and connect to a monitored number or Ashley's phone.

PHASE 3

Revenue & Experience — Weeks 4-6

April 30 – May 20, 2026 · 3 weeks · Build new revenue channels and upgrade client experience

Phase 3 targets the revenue opportunities and HoneyBook gaps identified in the audit. These take more effort but have the biggest dollar impact.

16 Build corporate retreat landing page + HoneyBook flow

ADAM CLAUDE HONEYBOOK: B → A REVENUE

No dedicated marketing for corporate events. Austin is a massive corporate events market. Build: (1) landing page on the new website targeting corporate event planners, (2) HoneyBook flow for corporate retreats with packages, policies, and booking steps, (3) LinkedIn company page content targeting corporate planners.

A single corporate retreat at $15K = 3 weekends of glamping revenue.

17 Build HoneyBook flows for private events + intimate events + retreats

ADAM CLAUDE HONEYBOOK: B → A

Only weddings have a HoneyBook flow. Private events (46% of revenue!) have nothing. Build branded flows for: private events, intimate events, wellness/yoga retreats, and glamping packages. Each should have pricing, policies, vendor options, and next steps — matching the quality of the wedding flow.

18 Build "Build Your Experience" add-on booking flow

ADAM CLAUDE REVENUE

Horseback riding, yoga, tomahawk throwing, hat making, line dance lessons — these exist as vendor options but aren't priced or bookable online. Build an add-on experience page on the website with pricing and a way to add to any booking. Even $50/person average on add-ons is significant.

19 Build breakfast taco/morning-after upsell for all stay types

ASHLEY CLAUDE REVENUE

Currently offered in the wedding flow at $600/50 guests. Extend to ALL overnight stays (glamping, retreats, corporate). Add as a checkbox at booking time. $15/person breakfast add-on for 50 guests/week = $39K/year.

20 Set up conversion tracking + UTM parameters

ADAM CLAUDE OPERATIONS: C → B

Can't optimize what you can't measure. Set up: Google Analytics 4 events on all form submissions, UTM parameters on all marketing links (social, email, GBP), conversion tracking on "Book Now" clicks, and a basic dashboard showing which channels drive inquiries.

PHASE 4

Scale & Systemize — Weeks 7-12

May 21 – July 8, 2026 · 7 weeks · Turn everything into a machine

Phase 4 is about making the whole operation run without single points of failure. CRM, SOPs, and ongoing content.

21 Implement a CRM for lead tracking

ADAM | ASHLEY | OPERATIONS: C → A

Everything lives in Ashley's email and head. If she's out for a week, leads go cold. Options: (1) HoneyBook CRM features (already paying for it), (2) Simple Supabase pipeline board Adam can build, (3) Airtable. Every inquiry, every follow-up, every status update should be tracked. This is the single biggest operational risk in the business.

22 Build SOPs for Ashley's critical processes

ADAM | ASHLEY | OPERATIONS: C → A

Document the top 10 processes only Ashley knows: inquiry handling, event setup checklist, vendor coordination, day-of operations, post-event cleanup, booking management, guest communication templates. These SOPs mean anyone can step in if Ashley is unavailable.

23 Build YouTube channel with venue walkthrough videos

ASHLEY | ADAM | SOCIAL: B- → A

No YouTube presence for a visual property is a major miss. Venue walkthroughs are what brides, event planners, and glamping guests search for. Start with 3 videos: (1) full property walkthrough, (2) wedding day setup timelapse, (3) glamping tent tour. These also embed in the website and GBP.

24 Launch Facebook as a real channel (not just cross-posts)

CLAUDE | AUTO | SOCIAL: B- → A

~500 followers and only cross-posts from Instagram. Brides' parents and corporate event planners live on Facebook. Build a dedicated content strategy: event albums, testimonials,

local community engagement, Facebook Events for public events. Claude can auto-generate and schedule weekly Facebook-specific posts.

25 Address the neighbor noise issue

NANCY | ASHLEY | REVIEWS

Critical The Knot review mentions a neighboring property playing loud amplified music that was "impossible to sleep through." This is a dealbreaker for weddings. Actions: (1) develop a disclosure script for tours so couples aren't blindsided, (2) explore noise mitigation options, (3) draft a response to the review acknowledging it and explaining steps taken, (4) consider event scheduling coordination with the neighbor.

26 Launch weekday utilization program

ASHLEY | ADAM | REVENUE

Property is likely empty Mon-Thu. Target: corporate day retreats, yoga/wellness workshops, photography shoots (engagement, maternity, branding), small private dinners, team-building events. Build a weekday-specific page on the website with lower pricing. Even at $500–1K per weekday event booked 2×/week = $100K+/year.

27 Upload 10+ owner photos to GBP across all categories

ASHLEY | MANUAL | GBP: D → A

Verified April 9: Photos exist across categories (Latest, Videos, Rooms, Exterior, Amenities, Food & drink, From visitors, By owner). Verify coverage is balanced — Google rewards having owner photos in EVERY category. Add drone/aerial shots if missing.

SEO/AEO

Search & AI Visibility — Ongoing

Starts immediately · Ongoing weekly · Accelerates after DNS cutover

Rancho Moonrise does NOT rank for any non-brand search query. "Best glamping near Austin," "wedding venues Austin TX ranch," "pool day pass Austin" — zero presence. AI answer engines (ChatGPT, Perplexity, Google AI Overviews) don't cite Rancho Moonrise at all. The Vercel site has good schema and page structure — but it's not live yet. Launching the new site on the main domain is the single biggest SEO/AEO unlock.

S1 Split blog posts into individual pages with unique URLs

CLAUDE | SEO: F → C

All 6 blog posts live on a single blog.html page — Google can't index them individually. Each post needs its own HTML file in site/blog/ with Article schema, canonical URL, meta description, and links back to the blog index. Blog index gets CollectionPage schema. This is a prerequisite for any blog SEO.

S2 Add answer-first H2 summaries to key pages

CLAUDE | AEO

AI engines extract the first sentence after each H2. Currently, page content buries the answer. Add a direct, extractable answer in the first sentence of every H2 section on: glamping page, weddings page, corporate retreat page, accommodations page. Example: "Rancho Moonrise is a 34-acre glamping ranch 20 minutes from downtown Austin with luxury safari tents, cabins, a pool, and event spaces for up to 200 guests."

S3 Build topical authority clusters with internal linking

CLAUDE | SEO + AEO

Pages exist but don't interlink deeply. Build three clusters: (1) Glamping cluster: glamping page ↔ packing guide ↔ glamping vs camping ↔ Austin outdoor activities, (2) Wedding cluster: weddings ↔ ranch wedding tips ↔ wedding venues near Austin ↔ bachelorette, (3) Events cluster: events ↔ corporate retreats ↔ host your event ↔ things to do Manor TX. Each page should link to 3-5 related pages with contextual anchor text.

S4 Add BreadcrumbList + SpeakableSpecification schema

CLAUDE | AEO

Add BreadcrumbList schema to all subpages (Home > Glamping > ...). Add SpeakableSpecification to homepage, glamping, weddings, and corporate pages — this tells AI engines exactly which text blocks are quotable answers. Also add AggregateRating schema pulling from the 125 Google reviews (4.9★).

S5 Create "Pool Day Pass Austin" dedicated page

CLAUDE | SEO + REVENUE

ResortPass already ranks for "pool day pass Austin" with a Rancho Moonrise listing. Own this query directly with a dedicated page on the new site — pricing, hours (10AM-6PM), what's included, photos, link to ResortPass booking. This is high-margin, low-effort revenue with search demand.

S6 Post-launch: Google Search Console + sitemap + indexing

ADAM | CLAUDE | SEO: F → B

After DNS cutover: (1) Set up Google Search Console for ranchomoonrise.com, (2) Submit XML sitemap, (3) Request indexing of all key pages, (4) Set up redirect map from old BofillTech URLs, (5) Monitor indexing weekly — all pages should be indexed within 14 days. This is the moment everything built above starts working.

S7 AEO baseline + monthly tracking

CLAUDE | AUTO | AEO

Baseline (April 9, 2026): Rancho Moonrise is NOT cited in any AI answer engine for non-brand queries. Monthly task: query ChatGPT, Perplexity, and Google AI Overviews for all 10 target keywords and log whether Rancho Moonrise appears. Track competitors who DO appear. Target: cited in at least 3 of 10 queries within 90 days of site launch.

S8 Blog-to-GBP automation

CLAUDE | AUTO | GBP + SEO

Every new blog post should automatically generate a GBP post with a summary + link back to the full article. Build as a scheduled task or n8n workflow that monitors the blog directory for new files and creates a GBP post within 24 hours of publishing.

AUTOMATION

Client Operations — Live Scheduled Tasks

These tasks run automatically on Adam's machine via the scheduled-tasks system. Each one reads the Rancho Moonrise voice guide, updates the repo's tracking files (CONTEXT / CHANGELOG / DECISIONS / TODO), and commits/pushes changes. All 6 are currently **live and active** as of April 9, 2026.

rancho-seo-aeo-weekly · ● ACTIVE

SEO/AEO session for Rancho Moonrise. Audits indexed pages, identifies schema gaps, drafts new FAQ/location content, checks AEO citations across ChatGPT/Perplexity/Gemini/Claude, and ships optimizations directly to the site repo. Primary engine for the Phase 2–4 SEO backlog.

Schedule: Mon / Wed / Fri at 5:09 AM · Owner: Claude · Cron: `0 5 * * 1,3,5`

rancho-gbp-weekly-post · ● ACTIVE

Generates and drafts a weekly Google Business Profile post. Rotates event announcements, property photos with captions, seasonal offers, and behind-the-scenes. Last run confirmed visible on GBP with post published within the hour — working as intended.

Schedule: Every Monday at 9:01 AM · Owner: Claude · Cron: `0 9 * * 1`

rancho-review-monitor · ● ACTIVE

Monitors Rancho Moonrise reviews across Google, TripAdvisor, Hipcamp, The Knot, and WeddingWire. Detects new reviews since last run, drafts on-brand responses for Ashley to approve, and flags negative reviews as urgent. Logs everything to the repo.

Schedule: Every Tuesday at 8:07 AM · Owner: Claude → Ashley approves · Cron: `0 8 * * 2`

rancho-metrics-weekly · ● ACTIVE

Pulls live data for all tracked metrics — target keyword rankings, GBP performance (impressions, clicks, calls, directions), AEO citations, review counts, social followers, indexed pages — and writes current values + week-over-week deltas directly into the Metrics tab of this dashboard. Auto-commits and pushes so the live page refreshes via Vercel.

Schedule: Every Wednesday at 6:08 AM · Owner: Claude · Cron: `0 6 * * 3`

rancho-moonrise-notebooklm-sync · ● ACTIVE

Watches the `deal/` and `brand/` folders for new or modified files and syncs them to the Rancho Moonrise NotebookLM so Claude can answer questions grounded in the latest contracts, brand assets, and voice materials. Deletes stale versions before re-uploading to avoid duplicate sources.

Schedule: Every 4 hours · Owner: Claude · Cron: `0 */4 * * *`

rancho-monthly-progress · ● ACTIVE

Generates a monthly progress report for the Rancho Moonrise improvement plan. Reviews completed tasks by phase, calculates grade movement since the April 9 baseline, surfaces wins, flags stalled items, and recommends what to focus on next month. Delivered as a clean one-pager.

Schedule: 1st of each month at 7:00 AM · Owner: Claude · Cron: `0 7 1 * *`

How these operate together: Every task reads the `brand/voice-guide.md` before generating content, so all outputs stay on-brand. Every task updates the four MD files (CONTEXT, CHANGELOG, DECISIONS, TODO) in the `rancho-moonrise` repo at the end of its run. Nothing emails Adam — all status rolls up to his daily briefing. No task touches the live site directly; all changes flow through git → Vercel auto-deploy.

Summary: Who Does What

OWNER	PHASE 1 (WK 1)	PHASE 2 (WK 2-3)	PHASE 3 (WK 4-6)	PHASE 4 (WK 7-12)
Ashley	GBP fixes (#1–4, 7), claim TripAdvisor (#5)	Hipcamp fix (#12), Cloudbeds fix (#13), enable chat (#15)	Breakfast upsell (#19)	SOPs (#22), YouTube (#23), photos (#27), noise plan (#25)

Adam	Q&A drafts (#3), link-in-bio (#6)	Inquiry automation (#9), DNS cutover (#11), pool pass (#14)	Corporate page (#16), HoneyBook flows (#17), add-ons (#18), analytics (#20)	CRM (#21), weekday program (#26)
Claude	Q&A drafts (#3), link-in-bio page (#6)	Review system (#8), inquiry emails (#9), GBP posts (#10), Hipcamp copy (#12)	Corporate page (#16), HoneyBook flows (#17), add-on page (#18), UTM setup (#20)	Facebook content (#24), all scheduled tasks
Nancy	WeddingWire listing (#5)	—	—	Noise issue (#25)

Expected Grade Trajectory

AREA	NOW	AFTER PHASE 1	AFTER PHASE 2	AFTER PHASE 3	AFTER PHASE 4
Website	D / B	D / B	— / A	— / A	A
Google Business Profile	D	B	A-	A	A
Social Media	B-	B	B+	B+	A
Reviews	F	D	C+	B	A
Booking Flow	C+	C+	B+	A-	A
HoneyBook	B	B	B	A	A
Operations	C	C	C+	B	A

Bottom line: 27 tasks across 4 phases over 90 days. 6 scheduled automations running in the background. The biggest jumps come from Phase 1 (GBP from D to B in one week) and Phase 2 (Reviews from F to C+ with automated collection). By July 8, every area should be at an A — and most of the ongoing work will be handled by automation, not Ashley's inbox.

Prepared by Adam Styer via Claude · April 9, 2026 · Based on the Rancho Moonrise Full Business Audit (April 8, 2026)
